Professional Summary

DevOps Engineer with 2+ years of experience in designing, automating, and managing cloud infrastructure across AWS, Azure, and GCP environments. Hands-on expertise in Kubernetes, Docker, AWS ECS/Fargate, Terraform, Jenkins, GitHub Actions, Azure DevOps, Ansible, Python, Bash scripting, and Infrastructure as Code (IaC) for building scalable, secure, and highly available cloud-native applications.

Experienced in implementing CI/CD pipelines, Kubernetes orchestration, containerized workload deployments, infrastructure automation, cloud security, monitoring, observability, and production support for SaaS and enterprise applications. Strong background in Linux administration, troubleshooting production incidents, root cause analysis (RCA), performance optimization, deployment automation, and cloud infrastructure management.

Proficient in AWS services including EC2, ECS, Fargate, VPC, IAM, RDS, Lambda, SQS, EventBridge, CloudWatch, Route 53, and Elastic Load Balancers (ALB/ELB). Skilled in monitoring and observability using Prometheus, Grafana, EFK Stack, CloudWatch, and New Relic. Experienced in microservices architecture, GitOps, containerized deployments, DevOps best practices, and managing cloud-native workloads in production environments.

Seeking opportunities in DevOps Engineering, Cloud Engineering, Platform Engineering, Site Reliability Engineering (SRE), and Infrastructure Automation where I can contribute to scalable cloud solutions, operational excellence, and continuous improvement of cloud infrastructure and deployment processes.

Skills

- **Cloud Platforms:** AWS, GCP, Azure
- **DevOps & CI/CD:** Jenkins, GitHub Actions, Bitbucket Pipelines, Azure DevOps, CI/CD Pipelines, GitOps
- **Containerization & Orchestration:** Docker, Kubernetes, Helm, ArgoCD
- **Infrastructure as Code:** Terraform, Terragrunt, Ansible, ARM Templates
- **Programming & Scripting:** Python, Bash, Shell Scripting, JavaScript
- **Monitoring & Observability:** Prometheus, Grafana, CloudWatch, Loki, Logging, Alerting
- **Cloud Services:** AWS Lambda, SQS, EventBridge, IAM, EC2, VPC, RDS, ECS
- **Linux & Platform Engineering:** Linux Administration, Nginx, YAML, JSON, Git, GitHub
- **Architecture & APIs:** RESTful APIs, Microservices, SaaS Platforms, Event-Driven Architectures

Experience

- **Hello Apps Technologies Pvt. Ltd.** Mar 2023 – Feb 2024
DevOps Engineer / Software Developer Bangalore, India
 - **Improved deployment reliability:** Collaborated with engineering teams to manage deployments, production operations, and release workflows across Linux-based environments.
 - **Resolved production incidents:** Performed root cause analysis and troubleshooting for application and infrastructure issues, reducing recurring operational failures by 30%.
 - **Managed backend infrastructure:** Worked with Linux servers, deployment configurations, Dockerized services, and cloud-hosted applications to improve operational stability.
 - **Supported SaaS platform operations:** Maintained secure and scalable deployment workflows for customer-facing applications and payment processing systems.
 - **Improved application performance:** Optimized deployment workflows and backend integrations to improve scalability and system responsiveness.
- **Paperlive Learning** Nov 2024 – April 2025
DevOps Intern / Platform Engineering Support Bangalore, India (Remote)
 - **Automated infrastructure provisioning:** Built reusable Terraform/Terragrunt modules for scalable multi-environment deployments and infrastructure standardization.
 - **Managed Linux cloud environments:** Worked extensively with Linux-based infrastructure, deployment automation, and Kubernetes workload management.
 - **Implemented monitoring solutions:** Configured Prometheus, Grafana, CloudWatch, and centralized logging systems for infrastructure observability and alerting.
 - **Improved operational efficiency:** Reduced infrastructure recovery time through automation, monitoring improvements, and proactive troubleshooting workflows.
 - **Enhanced cloud security:** Managed IAM policies, VPC networking, and secure deployment configurations for cloud-native applications.

- **GeekyAnts Pvt. Ltd.**
• *DevOps Engineer - 1*

Dec 2025 – April 2026
Bangalore, India

- **Built scalable cloud infrastructure:** Provisioned and managed AWS infrastructure using Terraform and Terragrunt for scalable and secure deployment environments.
- **Implemented CI/CD automation:** Designed automated CI/CD workflows using Jenkins, GitHub Actions, and Bitbucket Pipelines for build, testing, deployment, and release automation.
- **Optimized developer workflows:** Improved deployment efficiency and scalability by identifying bottlenecks in build systems, Docker workflows, and Kubernetes deployment pipelines.
- **Managed Kubernetes environments:** Deployed and maintained containerized microservices on Kubernetes clusters across Linux-based infrastructure environments.
- **Enhanced observability and monitoring:** Integrated EFK logging pipelines, Prometheus/Grafana dashboards, and CloudWatch monitoring for production visibility and incident management.
- **Performed production troubleshooting:** Conducted root cause analysis for infrastructure and deployment issues, reducing recurring operational incidents and improving system reliability.
- **Designed cloud-native systems:** Implemented RESTful API integrations and event-driven architectures using AWS Lambda, SQS, and EventBridge for scalable backend workflows.

Projects

- **SmartDeploy Platform:** Built a GitOps-based deployment automation platform using Kubernetes, Helm, ArgoCD, Jenkins, and GitHub Actions to automate application deployments across multiple environments. Implemented Prometheus, Grafana, and EFK logging for centralized monitoring, alerting, and observability of cloud-native workloads.
- **Fleet Connect - Event Driven Data Platform:** Designed and implemented event-driven microservices using AWS Lambda, SQS, EventBridge, IAM, and RESTful APIs to enable scalable asynchronous processing. Improved system scalability and reliability through cloud-native architecture and automated event workflows.
- **Cloud-Native SaaS Platform Monitoring System:** Built a centralized observability platform using Prometheus, Grafana, CloudWatch, and EFK Stack for monitoring Kubernetes-based SaaS applications. Automated alerting, log aggregation, and dashboarding to improve production visibility and incident response efficiency.
- **Wisecow Cloud Modernization:** Containerized legacy applications using Docker and migrated workloads to Kubernetes environments. Automated build, test, and deployment processes using CI/CD pipelines while improving scalability, deployment consistency, and infrastructure reliability.
- **ICOBs Infrastructure System:** Designed and deployed a **three-tier monorepo application architecture** using Docker, Nginx reverse proxy, and Linux-based infrastructure. Automated application deployments through CI/CD workflows, implemented infrastructure monitoring and logging solutions, and performed production troubleshooting and operational support to improve application scalability, reliability, and system availability.

Certifications

- Microsoft Certified – Azure DevOps Fundamentals
- DevOps Engineer Certification – Paperlive Learning

Education

- **KLS Gogte Institute of Technology**
• *Bachelor of Engineering in Computer Science*

Belagavi, India
Aug 2019 – Sep 2023
